

Custom group link

10/29/2024 9:35 am PDT

Every group on Heylo has a unique link. The group link contains the [group profile](#) - everything someone new needs to join the group, such as:

<https://heylo.group/sfbv>

[Admins](#) have full control over group links including their content, URL, and visibility. To edit a group link, navigate to the group tab, and then select “group appearance.”

Groups may only have one link. If a link is edited, the previous link is available for another group to use. If someone clicks on a past link, they land on Heylo group discovery.

Customizing the group link does not impact the group’s [permission](#) settings. [Admins](#) always control who can join the group, regardless of the link name.
