

Sharing across groups

09/05/2024 3:04 pm PDT

Heylo Enterprise helps group leaders communicate with all members of all groups in the organization. Sharing content such as events, links, and group member benefits enables group organizations to disseminate information across all members equally and simultaneously without administrative overhead.

Content types

- [Collab events](#)
- [Roles](#)
- [Links](#)

Refreshing content

Roles, links and pages can be updated instaneously across the entire organization. New groups added to the organization will automatically receive the content. Collab events, however, require each group to add the event as a collab.
