

Sharing across groups

02/21/2025 11:27 am PST

Heylo Enterprise helps group leaders communicate with all members of all groups in the organization. Sharing content such as events, links, and group member benefits enables group organizations to disseminate information across all members equally and simultaneously without administrative overhead.

Note, all content types are optional at the discretion of organization admins.

Brand assets

An organization can pass organization logo and brand colors to all chapter groups and update all simultaneously.

Content types

- [Collab events](#)
- [Roles](#)
- [Links](#)
- [Benefits](#)

Refreshing content

Content can be updated instaneously across the entire organization. New groups added to the organization will automatically receive the content. Collab events, however, require each group to add the event as a collab.
